

Navigating Error Recovery Code in Java Applications

Chen Fu and Barbara Ryder
Rutgers University

Exception Handling

- ✍ Java Applications run on layered system
- ✍ Subsystem Faults are translated into exceptions
- ✍ Proper handling is important

Exception-Catch Links

```
try {  
  ...  
} catch (IOException e){  
  ...  
}
```

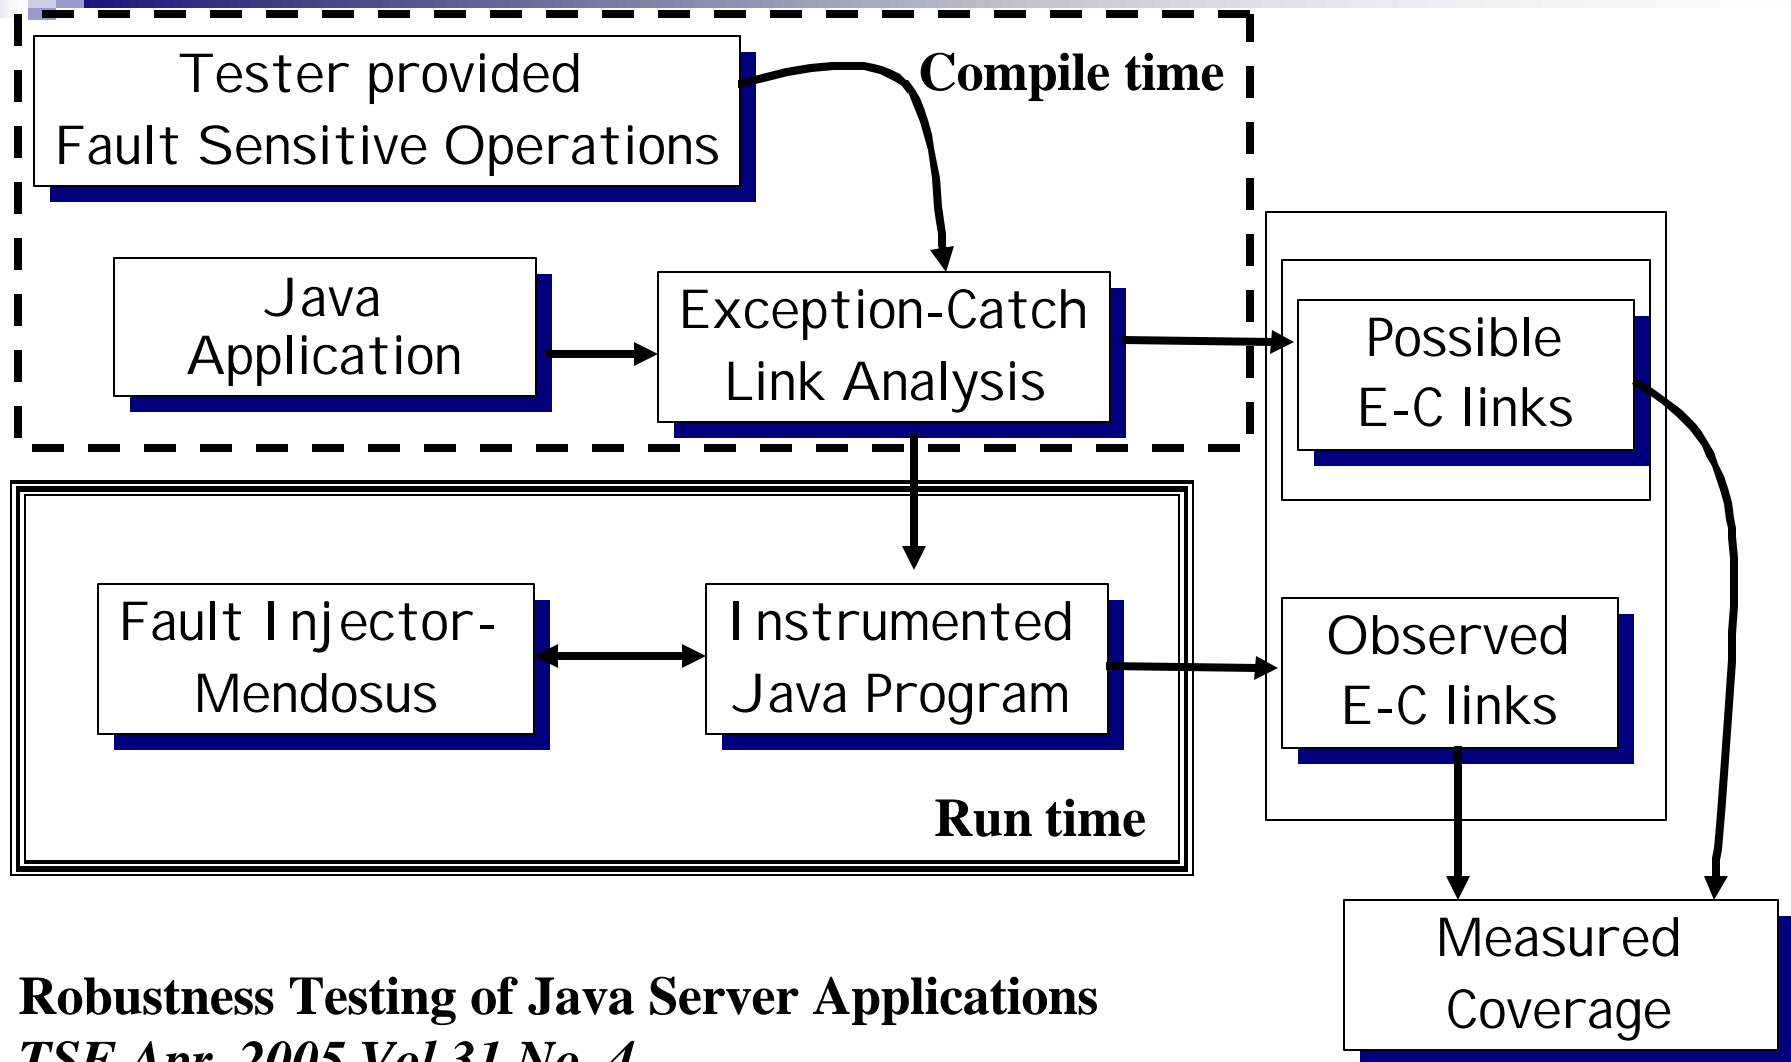

```
try {  
  ...  
} catch (IOException e){  
  ...  
}
```

```
try {  
  ...  
} catch (IOException e){  
  ...  
}
```

```
try {  
  ...  
} catch (IOException e){  
  ...  
}
```

Testing Framework

Robustness Testing of Java Server Applications
TSE Apr. 2005 Vol.31 No. 4

ExTest — Displaying *e-c links* in an IDE

e-c links

-  Propagation paths of exceptions

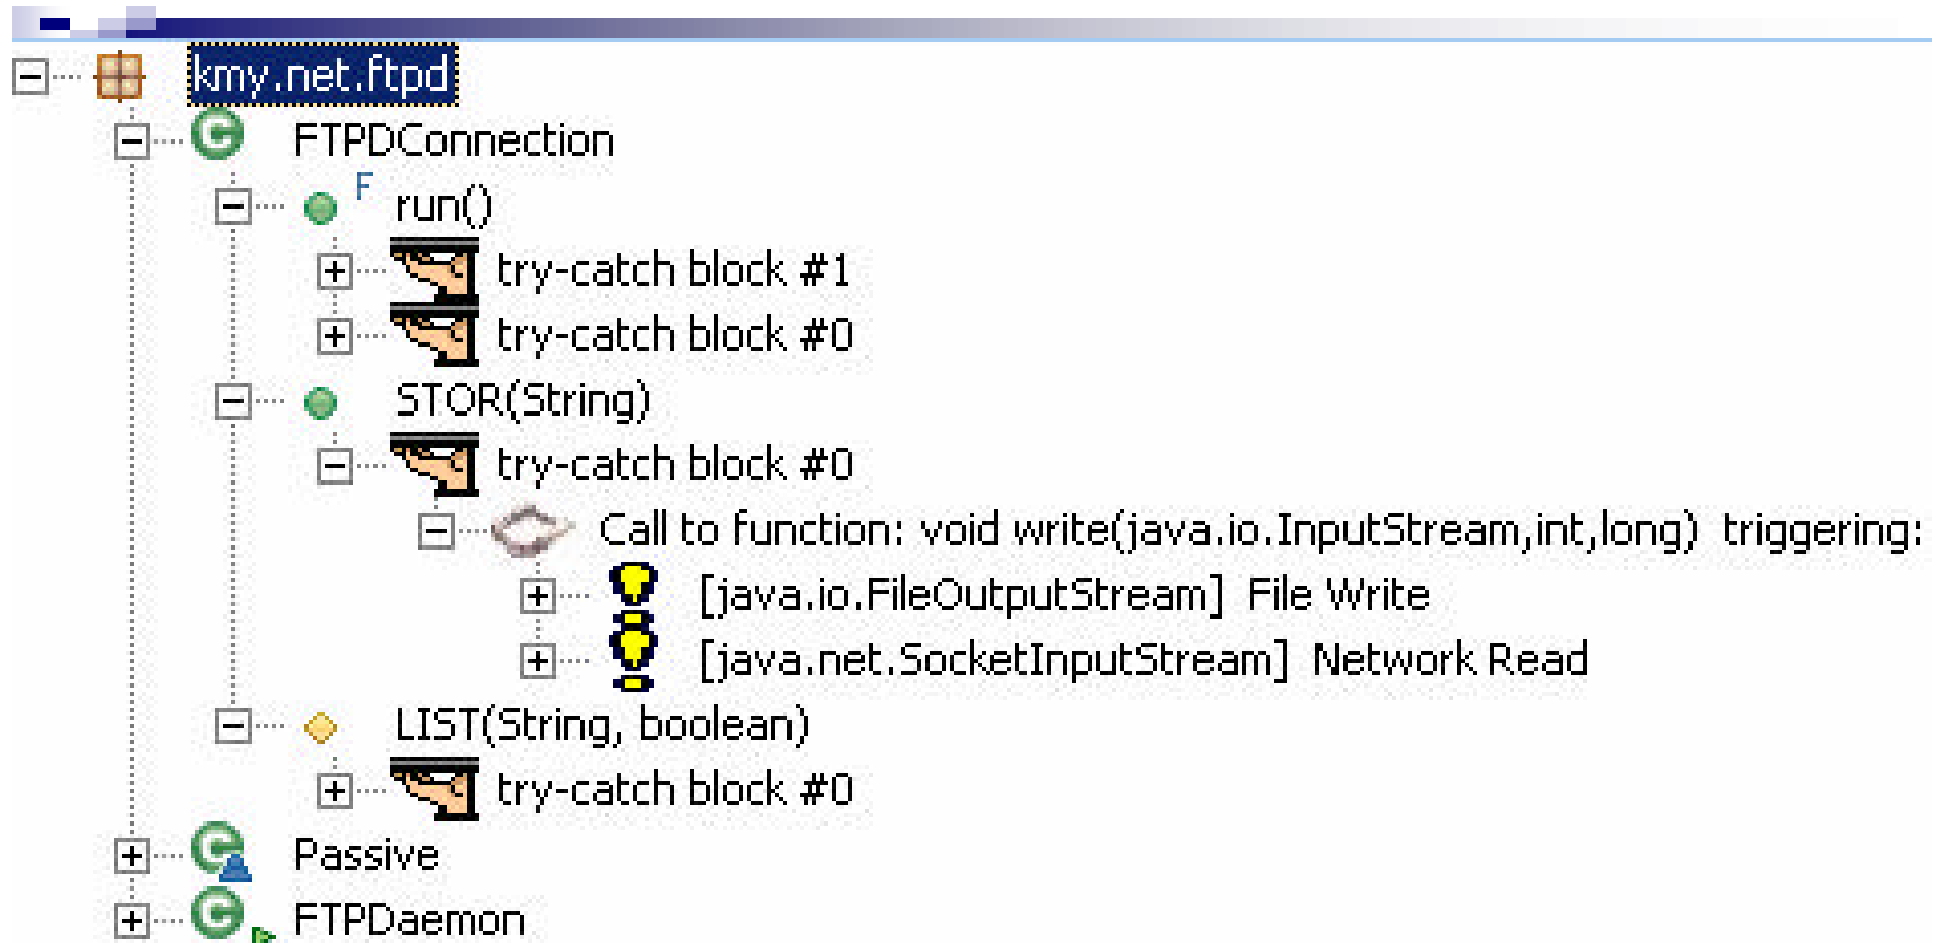

Program Understanding (error recovery part)

-  Visually display exception triggering points and the corresponding handling code.

Testing

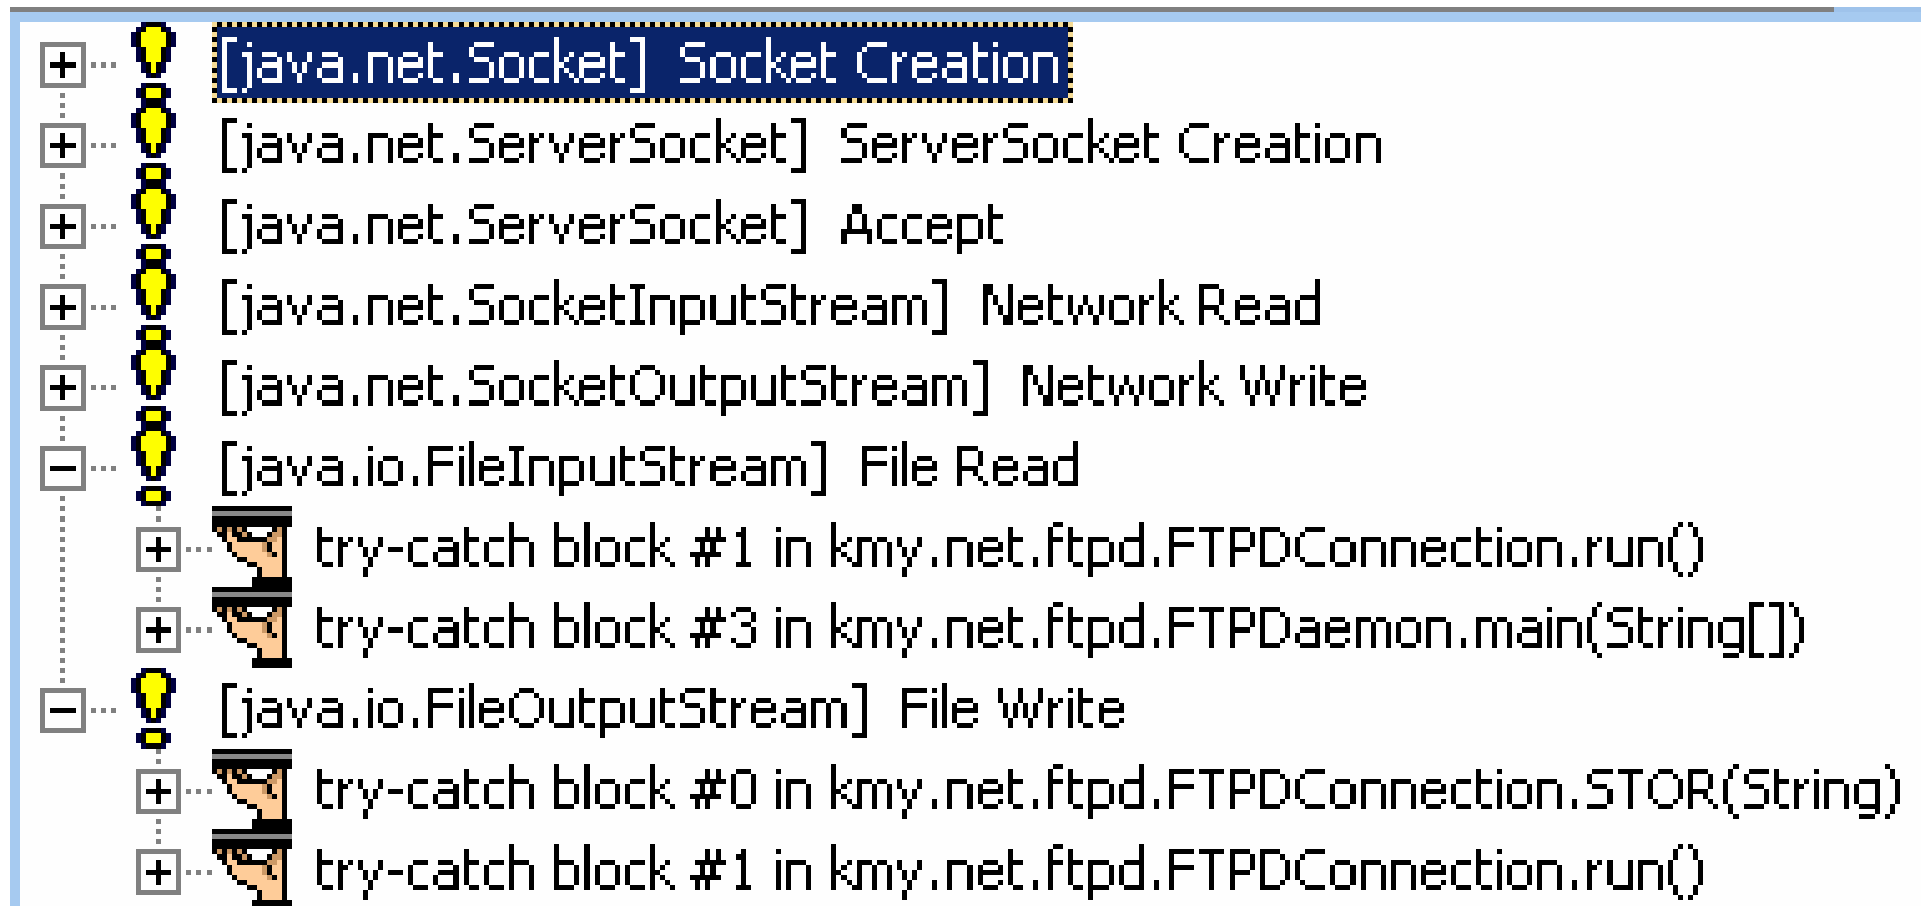

-  Help identifying spurious *e-c links*

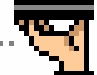

E-C links grouped by “catches”

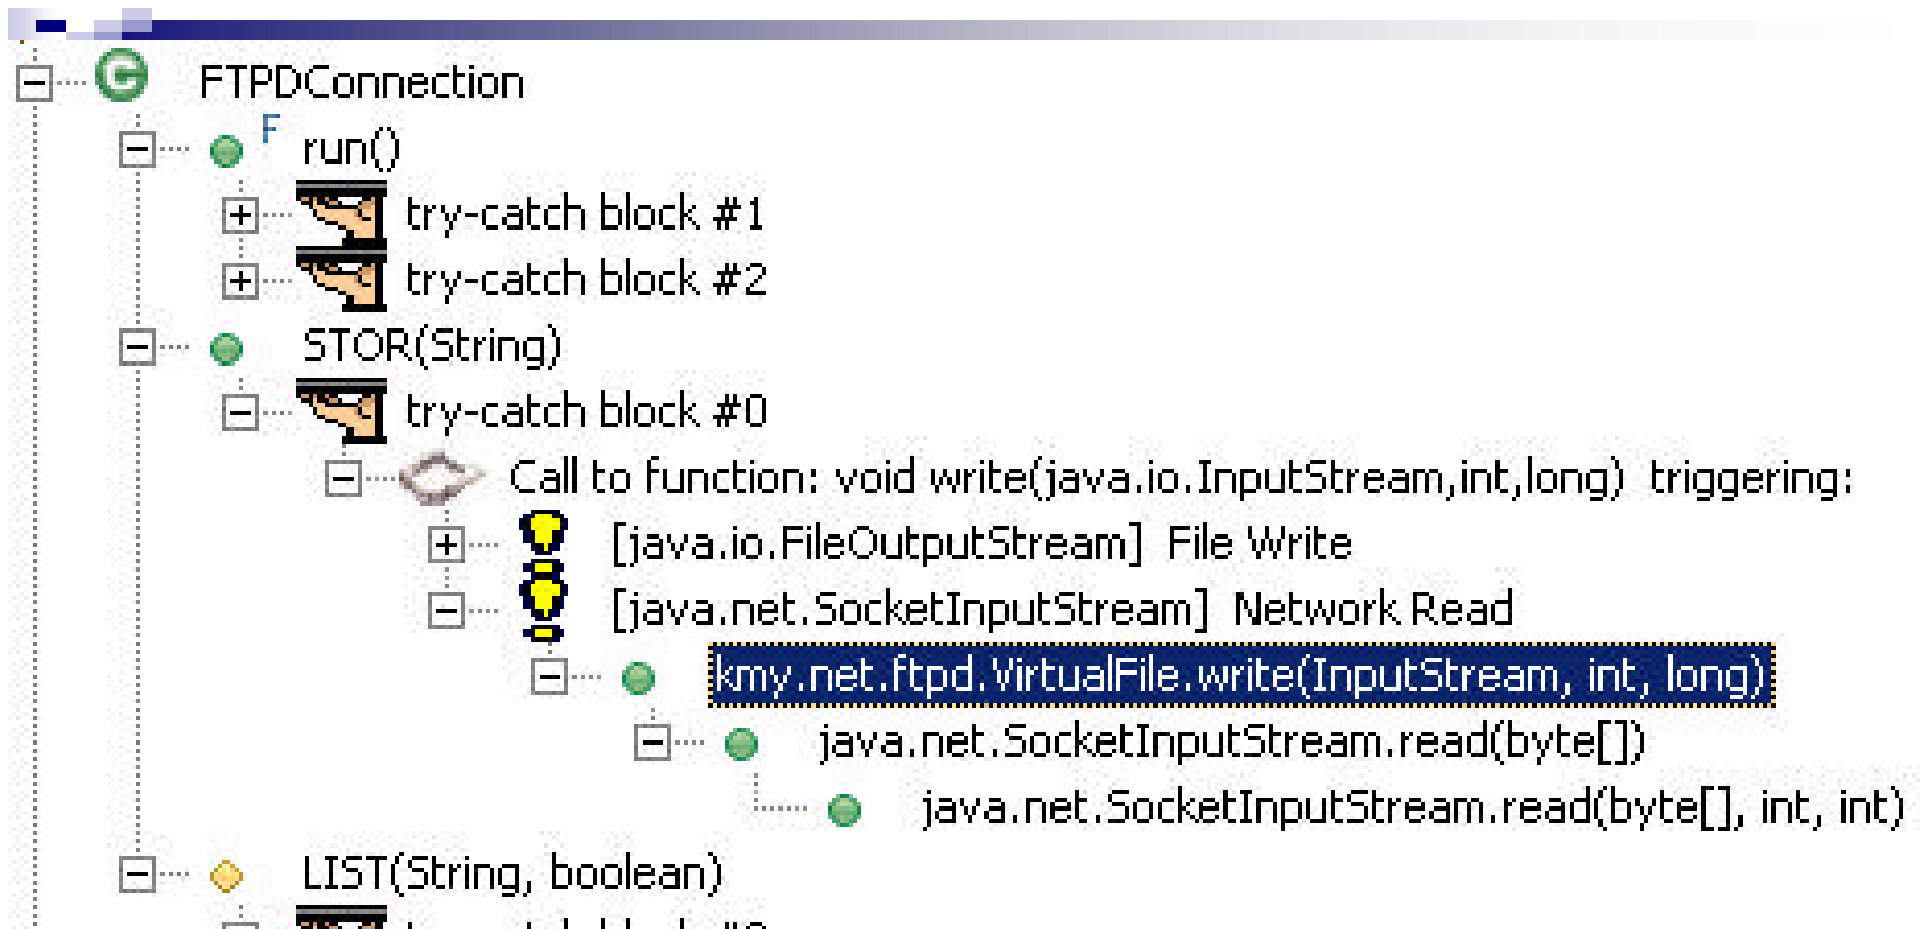

Screen shot of benchmark: **FTPD in Java** by **Peter Sortokin**.

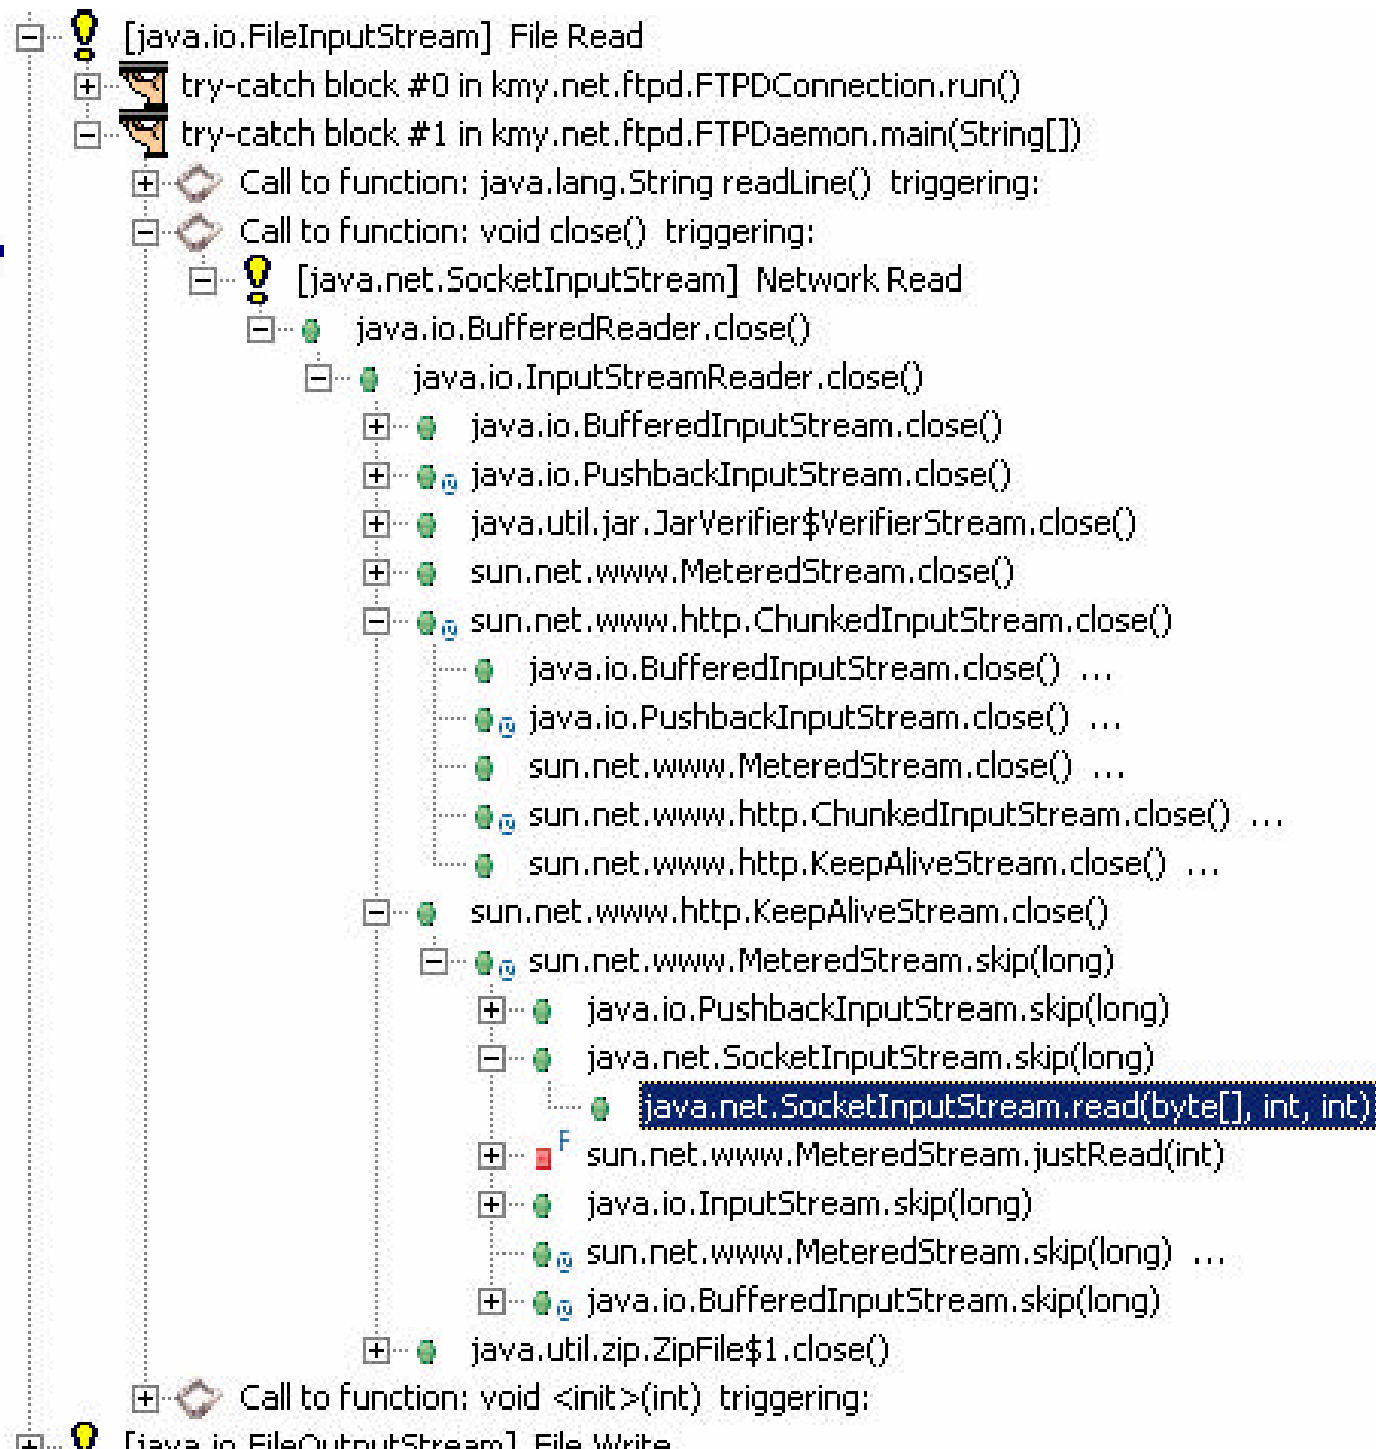

E-C Links grouped by “triggers”

- +...  [java.net.Socket] Socket Creation
- +...  [java.net.ServerSocket] ServerSocket Creation
- +...  [java.net.ServerSocket] Accept
- +...  [java.net.SocketInputStream] Network Read
- +...  [java.net.SocketOutputStream] Network Write
- ...  [java.io.FileInputStream] File Read
- +...  try-catch block #1 in kmy.net.ftp.d.FTPDConnection.run()
- +...  try-catch block #3 in kmy.net.ftp.d.FTPDaemon.main(String[])
- ...  [java.io.FileOutputStream] File Write
- +...  try-catch block #0 in kmy.net.ftp.d.FTPDConnection.STOR(String)
- +...  try-catch block #1 in kmy.net.ftp.d.FTPDConnection.run()
